THE PERFECT COMPLEMENT TO RENEWABLE ENERGY

Eco ULTRA is the only electric high-volume boiler on the market, and it is the perfect complement to all sources of renewable energy heat. This combination boiler-storage tank is designed for residential use and is practically maintenance-free. It serves as a back-up energy source to the primary system in order to maximize output and generate significant energy savings.
The combination of an electric water heater and a high-volume storage tank provides eco ULTRA with multiple savings in terms of efficiency, space and installation costs. In order to further reduce energy consumption costs, eco ULTRA can optionally be offered with an extremely efficient copper coil heat exchanger for domestic hot water, which heats (or pre-heats) potable water to meet a family’s needs.

STORE ALL THE ENERGY PRODUCED, AND EVEN MORE

When the primary renewable energy source is in operation, eco ULTRA stores thermal energy in its high water volume, just like a battery. This is what is called a thermal mass. When there is a low demand for heat (e.g., when there is little difference between the outdoor and indoor temperature) or when the unit is combined with a low-capacity energy source, the energy required for heating will come first from the thermal mass accumulated in the tank.

With its UltraSmart™ smart controller, eco ULTRA provides improved comfort through precise temperature control. In colder weather, the primary energy source is not always able to meet the heating demand at 100%. This is when the heating elements, controlled by the UltraSmart™ controller, provide the additional heat required from the thermal energy accumulated in the eco ULTRA tank in order to properly heat a combo or home.

Without combustion or greenhouse gas emissions, eco ULTRA is an energy-efficient alternative as well as being durable and easy to maintain.

The eco ULTRA thermal mass electric water heater is perfect for optimizing the performance of many types of heating systems:

- Biomass heating
- Air-to-water heat pumps
- Geothermal applications
- Solar energy systems

eco ULTRA 4.5 KW TO 29 KW

- Heating stops when outside temperature gets warmer
- "Boost" mode that automatically increases the temperature when needed
- Works only when triggered by the thermostat
- Ability to purge the pump when system is not running

STANDARD FEATURES

1. UltraSmart™ Controller
2. Boiler Pressure Relief Valve
3. Drain Valve
4. Heating Water Supply
5. Heating Water Return
6. Electrical Panel
7. Electric Elements
8. Temperature and Pressure Indicators
9. Automatic Air Vent

FEATURES WITH OPTIONAL COPPER COIL HEAT EXCHANGER

10. Copper Heat Exchanger
11. Domestic Cold Water Supply (G4 Sweat M)
12. Domestic Hot Water Output (G4 Sweat M)

1. Electrical supply: 120/240 V or 120/208V single-phase L1 – N – L2 with three 80°C conductors, or two conductors L1 – L2 if the boiler does not require more than a 120/208V pump or accessories.
2. Multiply by .75 for a 208VAC power supply.
3. Multiply by .85 for a 208VAC power supply.
4. The wire gauge and breaker capacity must be in conformity with the standards of the National Electrical Code (NEC), Canadian Electrical Code (CEC) and local codes (if applicable).

**MULTI-POSITION INSTALLATION**
